Office Action Summary

Application No.

10/523,657

Applicant(s)

CARLINO, STEFANO

Examiner

Roy P. Issac

Art Unit

1623

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-9 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-9 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. ____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 02/04/2005.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. ____.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: ____.

Art Unit: 1623

DETAILED ACTION

This application is a 371 of PCT/IB03/03524 filed 08/04/2003 and claims priority under 35 U.S.C §119 (a)-(d) and 365(c) to foreign application EPO 02405681.4 filed 08/07/2002.

The preliminary amendment filed 02/04/2005 in which claims 3,4,6,7 and 9 were amended is acknowledged. Claims 1-9 are currently pending and are examined on the merits herein.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-6 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-2, 7 and 8-10 of U.S.

Art Unit: 1623

Patent No. 6,489,467. (PTO-892, Cited by the examiner). Although the conflicting claims are not identical, they are not patentably distinct from each other because the '467 patent claims a process for purifying high molecular weight hyaluronic acid (HA) comprising the steps of filtering a solution comprising the steps of filtration of a solution comprising HA followed by concentrating or freeze drying.

The '467 patent claims a process in which HA through a filter with a pore size in the range from 100,000 Daltons nominal molecular weight cut-off to 0.45 μm . (Column 9, Claim 1). The '467 patent claims a method further comprising a step of concentrating the filtered solution. (Column 10, Claim 10, lines 1-5) and a process of freeze drying the sterilized solution.

The '467 patent does not expressly use the step of concentrating filtered aqueous formulation by applying vacuum.

It would have been obvious to one of skill in the art to apply vacuum to concentrate the filtered solution of HA. Selecting vacuum method to concentrate a solution is considered a routine step within the knowledge of one of ordinary skill in the art.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter

Art Unit: 1623

which applicant regards as the invention. The lack of lower limit in ranges represented by recitations "less than 0.45 μm ", "0.45 μm or less" and "less than 200 millibars" renders the claims indefinite.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carlino et. al. (WO 00/44925; PTO-1449, Included by the examiner) in view of Sakuma et. al. (EP 0631799 A1; PTO-892, Cited by the examiner).

Carlino et. al. discloses a process for purifying high molecular weight hyaluronic acid. (Abstract). The molecular weight of HA was disclosed as more than 5×10^5 Daltons, overlapping with the 800,000 to 5,000,000 Daltons range claimed herein. (Page 3, paragraph 4). Filter of 0.2 μm is disclosed. (Page 7, paragraph 6-7). Carlino further discloses a monitoring of optical density of the solution during filtration. (Page 7, last paragraph to page 8 first paragraph). Carlino further discloses adjustment of pH by addition of NaOH after filtration. (Page 8, Paragraph 5; Page 10, paragraph 8). This is considered a step of adding excipients that affect conductivity. The filtration process is considered a sterilization step. (Page 10, Paragraph 6-7).

Carlino does not expressly disclose the use of vacuum to boil off water.

Sakuma et. al. discloses a vacuum concentration plant. (Abstract). The vacuum concentration plant is disclosed as useful for concentration enzymes and protein solutions. (Page 3, lines 5-12). Sakuma et. al. discloses that the process is useful for concentrating solutions sensitive to heat. (Page 3, paragraphs 3-5). Sakuma et. al. further discloses method for adjusting pressure in vacuum vapor generator. (Page 6, lines 20-35). A procedure for concentrating liquids using vacuum concentration plant is further described. (Page 6 line 36-Page 7, line 2). It is considered within the capabilities of one of skill in the art in their routine activities to choose the appropriate settings for pressure and settings to determine the liquid level to stop the vacuum concentration step or to measure the concentration using a spectrophotometer, or to measure and adjust conductivity, all techniques well known and routine in biological and biochemical arts. It has been held that it is within the skill in the art to select optimal parameters, such as amounts of ingredients, in a composition in order to achieve a beneficial effect. See *In re Boesch*, 205 USPQ 215 (CCPA 1980).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to prepare a sterile ready-to-use aqueous pharmaceutical formulation comprising a high molecular weight hyaluronic acid salt at a specified concentration comprising the steps of providing an aqueous formulation comprising high molecular weight HA at a concentration of less than the specified concentration, passing said aqueous formulation through a filter having a pore

Art Unit: 1623

size less than 0.45 μ m and concentrating said aqueous formulation by applying a vacuum and boiling off water until said specified concentration is reached.

One of ordinary skill in the art would have been motivated to use a vacuum concentration method to concentrate the filtered HA solution as claimed herein, because the process of purifying HA by filtration is described by Carlino et. al. and Sakuma et. al. discloses a method for concentrating solutions including proteins and enzymes by vacuum concentration that has the advantage of concentrating solutions at low temperatures.

Therefore, one of ordinary skill in the art would have reasonably expected that the use of sterile filtration followed by vacuum filtration would result in concentrated solutions of HA.

Thus the claimed invention as a whole is clearly prima facie obvious over the combined teachings of the prior art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Roy P. Issac whose telephone number is 571-272-2674. The examiner can normally be reached on 9:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Shaojia Anna Jiang can be reached on 571-272-0627. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 1623

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
